

Prometheon

Multi-Domain Information Management System

Prometheon

Superiority in critical missions

Prometheon supports the efficient execution of surveillance and reconnaissance missions by merging real-time data from sensors, different platforms and systems into a unified and common operational picture. This forms the basis for situation-appropriate rapid decisions in dynamic deployment scenarios.

OPERATIONAL SUPERIORITY

Rapid Responsiveness

Critical developments are immediately recognised and options for action are implemented immediately.

Efficient Mission Fulfilment

Valuable resources are used in a targeted manner, processes are optimised and deployment times are significantly reduced.

Resilience

Operational capability even in the event of communication interruptions.

Improved Collaboration

Coordinated action – across organisations and multiple domains.

KEY FEATURES

REAL-TIME

Data Fusion

A wide variety of information is brought together to create a unified common operational picture.

PRECISE

Decision Support

Situation-specific information enables rapid, informed decision-making and adaptive resource allocation in critical operations.

CLEAR

Information Superiority

Relevant data is highlighted, irrelevant data is filtered out – decision-makers receive targeted support.

ROBUST

Distributed Communication

Self-sufficient subsystems ensure the ability to act at all levels, even with limited connectivity.

ADAPTABLE

Seamlessly integrated

Scalable for different organisation sizes and mission types with possible connection to existing systems.
