Airborne Surveillance Projects

Aerodata's expertise in airborne surveillance has been recognised by a range of clients, including government agencies, military organisations and service providers. We have delivered solutions for a variety of applications, such as maritime surveillance, search and rescue, border control and environmental monitoring.

With over 40 years of experience in the aviation industry, we are a trusted partner for clients who require high-quality special mission conversions based on advanced mission system technology.

- ▶ Delivery of Mission Management Systems

AERORESCUE

Australia | Dornier 328 2007

Mission: Search & Rescue Aircraft: 5

- ▶ Delivery of a Special Mission Aircraft

AeroMission®

Integrated System Solution

AeroMission® is a high-tech innovation in defence and security, specifically tailored to the demanding requirements of sovereign ISR operations. Combining advanced technology with mission-proven reliability, it enables armed forces and security organisations to achieve maximum effectiveness and provide real-time situational awareness.

AeroMission® thus makes a decisive contribution to strengthening international security on land and at sea. From mission planning and effective operational performance to post-mission analysis, AeroMission® is the state-of-the-art Mission Management System for airborne special missions. The system integrates various sensors and subsystems into a single, user-friendly, network-based solution.

The biggest advantage: the system is modular and can be configured according to customer requirements. Extensions and adaptations to the system are possible at any time on the basis of the modular approach.

A wide range of missions not limited to

Maritime Surveillance

Maritime Patrol

incl. the deployment in Anti-Submarine / Anti-Surface duties

Search & Rescue

Pollution Monitoring

Border Patrol

Fishery Patrol

Anti-Narcotics Surveillance

Public Safety Missions

MORE THAN 60
MISSION SYSTEMS
DELIVERED

60

to customers from
around the world.
